2018 LSSS 2019

LIFE SCIENCES SEMINAR SERIES

09.10.2018 Pamela Ronald

Serving up Science: Plant Genetics and the Future of Food

16.10.2018 David Agard

Structural mechanisms of microtubule nucleation and centrosome assembly

13.11.2018 Manjit Hayer-Hartl

Chaperone machineries for the biogenesis and metabolic repair of RuBisCO, the most abundant enzyme in nature

20.11.2018 Carien Niessen

Cell adhesion and polarity signaling in making, maintaining and breaking epithelial barriers

27.11.2018 Thomas Jentsch

The volume-regulated anion channel VRAC: molecular identity and diverse functions

22.01.2019 Jennifer Lippincott-Schwartz

Pathways of organelle-organelle cross-talk and their role(s) in cell metabolism and homeostasis

19.02.2019 Henrik Kaessmann

The evolution of mammalian gene expression programs

26.02.2019 David Stern

Neural changes underlying fly song evolution

26.03.2019 Francesc Posas

Stress adaptation in eukaryotes; the role of stress-activated protein kinases

02.04.2019 Laura Machesky

Signaling to actin dynamics in cancer invasion and metastasis

09.04.2019 Susan Mango

Dynamic chromatin in development

16.04.2019 Manuel Thery

Architecture and mechanics of microtubule networks

14.05.2019 Adam Frost

Toward Atomic Resolution Understanding of Cellular Membranes and Membrane-Remodeling Machines

04.06.2019 Beverly Glover

Evolution and development of petal nanostructures that influence animal behaviour

11.06.2019 Maya Schuldiner

Systematic approaches to study organelle biology
